Chris Barrie, best known for his starring roles in comedies *Red Dwarf* and *The Brittas Empire* and as Lara Croft's loyal butler in the *Tomb Raider* movies, shows us his alter ego in this unique series: at heart Chris is a true petrol-head who loves nothing better than pulling on his overalls and getting to grips with large chunks of greased up metal.

In *Massive Engines*, Chris tells the story of the development of engine power across a range of ten different types of machines. Constantly on the move, he combines great historical anecdotes with hands-on demos and test-drives to give fascinating insights into how these great machines, old and new, accomplish extraordinary feats.

Massive Engines has screened on both Discovery and Five. Attracting over a million viewers a week it became one of Five's top rated shows.

This double DVD set contains all ten episodes from the series:

- Diggers, Racing Cars, Rockets, Bikes,
- Airliners, Pumps, Ships, Trucks, Airships and Locomotives.
